

10/07/26

1. Find out the history of towers of hanoi.
- 2) Today from the morning 7:30 AM to 4:30 PM
list out data structures in your surroundings.

1. The tower of hanoi is a mathematical puzzle invented by edouard lucas, a french mathematician in 1883.
2. It consists of three rods/towers and a no of disks of different sizes.
3. The disks are initially arranged on one rod, with the largest at the bottom and the smallest at the top.
4. The aim is to move all disks to another rod.
5. Only one disk can be moved at a time.
6. For n disks the minimum no of moves is $2^n - 1$.
7. It is commonly structures used to explain recursion in computer science.

- 2) Bus seats - array
class room seating - array
college time table - array
roll no list - array
left queue - queue
ATM waiting time - queue
songs playlist - queue
alarm in mobile - queue
Benches in a class - array
contact list - linked list.
