

Java generates hash code for every obj find out what is the hash code in java. and the purpose of generating hash code.

1) what is a hash code in java?

A hash code is a 32-bit integer value generated for every java object. it is returned by the hash code() method, which is defined in the object class.

- java provides the hash code() method in the object class.

Syntax:-

```
int hashCode()
```

Example:-

```
class student {
    int id;
    student (int id) {
        this.id = id;
    }
    public int hashCode() {
        return id;
    }
    public static void main (String[] args) {
        student s = new student(10);
        System.out.println (s.hashCode());
    }
}
```

Output:- 10
